

Marking Criteria & General Feedback – Assignment #03

**Semester:
Spring 2026**

**Section:
BCS-2G**

April 22nd, 2026

Syllabus:

Digital Logic Design Theory

Syllabus Code: EE-1005

Instructor:

Sir Dr. Muhammad Adeel

Marking Criteria

- All questions and any (sub questions/parts) carried equal marks distribution (10/each)
- Except the last one 7 marks for the wave form and 3 marks for the function that you were asked to identify
- Wrong Answer loses 1 mark (no ECF on the answer)
- Rest of the marks are for method, the more number of shifts in waves you got incorrect the more marks were lost
- If an error was made in the initial part of the waveform, which caused the entire diagram to be incorrect, deduction was only made for that what you got wrong the rest of the wave was awarded full on the basis of ECF (given that the shifts you made afterwards were logically correct)
- Even if the feedback says incorrect you were awarded partially for ECF/effort

How to read the feedback report KEY

- If incorrect is written beneath a question that means there was either a partial error or the entire waveform is incorrect
- Use it for your improvements
- I tried my level best to be fair with grading every assignment

At the end of the day I am a human, and I can make mistakes. Hence if you have appropriate justification you may challenge me. I will always be open to you guys challenging my grading.

But I have already awarded everyone maximum possible marks everywhere for effort and ECF (where applicable). Even if the entire question was incorrect you still were graded 4/5 for effort (which imo is very generous)

But if you have a VALID VALID JUSTIFICATION THEN ONLY YOU MAY

Some General Feedback

- Please read the complete question first with an open mind. A lot of times you know the solution but because you are reading stuff quickly you tend to miss read or miss out part of what was asked in the question
- Like many of you either drew the waveform and forgot to write the function the device was performing and vice versa.
- A good strategy (which I follow) would be to underline key components or what the question is asking for when you read it so that you don't miss stuff and can go through what you have highlighted
- Great job guys, all of you did very well on this assignment
- JazakAllah for making things easier for me this time no cropped/half landscape half portrait images/copies were submitted or anything like that
- I don't like deducting marks, I want you guys to get full/maximum possible that is why I mark leniently, in my opinion marks should not be that hard to get by what matters is the effort and A students will to learn
- Please be mindful of Plagiarism, Sir Dr. Muhammad Adeel is an extremely forgiving and lenient teacher, otherwise there are some teachers that can go as harsh as awarding a straight 0 (to both the one who gave the assignment [although he did it on his own] and the one that submitted the other's assignment) and some can even go to the extent of following the university's policy of a course failure (just be careful for the rest of your degree's duration)
